Project Management	Responsive Design	Server Management	Database Optimization	Web Analytics
Problem Solving	Design Conversion	DNS Management	Performance Improvements	Accessibility
Communication	Graphic Design	Site Security	SEO Site Audits	

Professional Experience

Plymouth Rock Assurance, Woodbridge, NJ

2025-Present

Senior WordPress Developer – Backend (Contract)

- Build and maintain landing pages and reusable content components.
- Enhance website speed, performance, scalability, and security through effective optimization techniques.
- Own technical decisions and translate complex client needs into thoughtful, scalable solutions.
- Lead the technical implementation and documentation of custom themes, plugins, and system integrations.
- Manage multiple projects, adapt to shifting priorities, and adapt as projects evolve.
- Responsible for ongoing maintenance, troubleshooting, updates, and feature enhancements for existing projects.
- Own QA and testing of work to ensure stability and quality before anything reaches a stakeholder.
- Developed a New Relic dashboard and alerts to monitor server health and highlight areas to improve.
- Eliminated PHP errors and performance bottlenecks from existing project code.
- Restructured and combined several plugins to use a new build workflow that improves the deployment process.

Self-employed

2016-Present

Freelance Web Developer

- Design, build, and customize WordPress websites. Specialize in fixing, enhancing, and improving page load of existing sites. Implement WordPress, server, and CDN configuration changes to handle increased traffic.
- Created an open source WordPress plugin with highly configurable features to improve page loading speed.
- Created an event calendar website with a weekly email newsletter that sent a targeted list of events to 6,000+ subscribers based on their location and other custom-developed newsletter settings.
- Created a meal delivery service directory website with a JavaScript maps API integration and a customer location filter based on business service areas.

TechnologyAdvice, Nashville, TN (Remote)

2021-2025

Senior Web Developer

- Responsible for design implementation, WordPress plugin and Core updates, Core Web Vitals monitoring, performance improvements, MySQL query optimization, site migrations, Ad loading improvements, hosting environment improvements, support ticket responses, routine technical maintenance, and technical emergency response for over 40 large-scale WordPress news websites.
- Stabilized and maintained a high-traffic news site with over 9 million user accounts and payment API integration by finding and fixing bugs in poorly documented legacy code.
- Regularly optimized database queries by using Query Monitor and extensive knowledge of Core hooks and filters.
- Coordinated with DevOps to migrate websites from WP Engine to Kubernetes and save over \$6,000 per month.
- Created a WP plugin which improved ad rendering and caused a 200% increase in the ad fill rate.
- Developed Vue.js components for a WP plugin that integrated with an internal API to display product reviews.
- Repaired a legacy React application that had become disconnected from a third party CRM API.

Department of Homeland Security, Washington, DC

Senior SharePoint Developer

- Developed and released web applications that integrated with the SP environment on schedule.
- Built JavaScript frameworks to deploy new internal sites using a standard, accessible design.
- Created a flexible Procurement Request system that streamlined the purchase process to save time.
- Initiated and created a JavaScript-based project dashboard that pulled information from various locations and made it easy for developers, testers, and PMs to find project documentation and track bug status.

2015-2019

U.S. Army, Aberdeen Proving Ground, MD

IT Specialist

- Managed the development of multiple projects as Contracting Officer Representative (COR).
- Served as a web developer on multiple projects.
- Managed the budget and purchases for the creation of a large Cloud project to save hosting costs.
- Provided administration and end-user support for multiple SharePoint customer portals.
